

General idea of the game

The cards with the high values are the strongest, but somewhat awkwardly. The cards with the low values are the weakest, but can be played smartly.

Each player plays a card in turn. The player with the lowest card receives the highest card as profit. The player, who had the highest card, receives all remaining cards as profit.

In the end the game, players get points in each color. If one has, in a certain color (for example red), only one or two cards, one gets the face value in each case - which can be very lucrative. If one has more than two cards in a certain color, each of these cards only counts 1 point.

Game preparation

According to the number of players, some cards must first be sorted out.

- With 3 players only cards with the values 1-9 are required (= 45 cards).
- With 4 players only cards with the values 1-12 are required (= 60 cards).
- With 5 players only cards with the values 1-15 are required (= 75 cards).
- With 6 players all cards are required.

The cards that are not required are put aside. The cards are shuffled and evenly distributed. Player receives 15 cards, that they take into their hands.

Course of the game

The starting player chooses any of her cards and plays it, i.e.: she discloses it in front of herself on the table. Now all players must also clockwise in turn play a card and set it in front of themselves. This must always happen: the first color played must be followed! If a player cannot follow the color, she may play any other color.

Once play has gone once around the table, the highest card is determined first, the lowest card is determined after it.

- The highest card is always the one with the highest number - independently from the color! If several players have played the highest number, the one that was played last is regarded as the highest.
- The lowest card is always the one with the lowest number - independently from the color! If several players have played the lowest number, the one that was played last is regarded as the lowest.
- The player with the lowest card receives the highest card as profit. He/she places it face up beside them on the table.
- The player who had the highest card receives all remaining cards as profit. He/she places all captured cards face on the table beside them, separated by color.

The player who had the highest card now begins the next round in the same way described. The game proceeds in this way until 15 rounds have been played and everyone has played all 15 of their cards.

(In the game everyone gets more and more cards as profit. Each player puts all cards they've won, after separating colors, clearly beside them on the table - each single card must be visible.)

Play example

- Zoë plays the green 4 (now green must be followed)
- Jazzy plays the green 9
- Josiah plays the red 2 (he has no green)
- Issac plays the green 7

Jazzy's card is the highest (green 9). Josiah's card is the lowest (red 2). Josiah receives the highest card as profit (Jazzy's green 9) and places it face up beside him.

Jazzy receives all remaining cards as profit. She places these all face up beside her, separated by color.

Jazzy now begins the next round and plays any card of her selection.

Final scoring

Players receives points for all cards, that they have won in the round. Each color is tallied separately. First one scores red, then yellow, then green, etc.

If players have only one or two cards in a certain color, they receive the face value of each card.

If players have more than two cards in one certain color, they only receive 1 point for each of these cards.

Finally players add the points they have in the 5 colors. That sum is the total score.

Scoring Example

Zoë has the following cards in front of him at the end of the game:

In red: 4, 10, 11 = 3 points

In yellow: 8 = 8 points

In green: 5, 9 = 14 points

In blue: 2, 3, 6, 10, 12 = 5 points

In violet: 10, 12 = 22 points

Zoë's total score: 52 points!

After the entire round, the results of each player are listed. There should be as many rounds as there are players participating. Whoever finally has the most points at the end of the game is the winner.
