

PEDZACE JEZE

Kolec w kolec

Game for 3-5 players of age 6-106.

Author: Reiner Knizia
Illustrations: Rolf Vogt

GAME COMPONENTS

Board

55 Cards

36 Point Tokens

4 Hedgehog Figures

GOAL OF THE GAME

Game lasts as many rounds as there are players.
After each round players score points.

At the end of the game the player with most points wins the game.

ROUND PREPARATION

1. Place the board in the table center.
2. Place all hedgehogs on the Start field.
3. Shuffle the cards and deal equal number to each player. If there are less than 5 players, before dealing out cards, put some of them back in the box:
 - 10 cards in a 3-player game
 - 3 cards in a 4-player gameHold your cards in such a way, that the opponents can't see them.
4. Place point tokens next to the board.

Game prepared for a 5-player game

PLAYER'S TURN

The player who last ate an apple begins the first round (or the youngest player).

Player selects **one card from hand and places it open on the table** (all played cards are placed on one common pile). Then the player moves the hedgehog in a shown color by a number of spaces:

- One space

- Two spaces

Note! The card with a rainbow hedgehog is a joker – player can move **any color** hedgehog.

After playing a card and moving a hedgehog, player ends his turn. Then it's the next player's turn (in clockwise order).

Examples

Player plays a purple hedgehog card with 2 plus signs. He moves the purple hedgehog 2 spaces forward.

Player plays a rainbow hedgehog card with 1 plus sign. He selects a red hedgehog and moves it 1 space forward.

END OF THE ROUND AND SCORING

The round ends immediately, when one of the hedgehogs enters the last space (with number 3). Then scoring takes place.

Scoring Points

- Players score points for the **cards they have in hand (they haven't played)**.

Each card is worth points equal to the space value that color hedgehog is standing on.

For example, if green hedgehog stands on space with value 2, then green cards will be worth 2 points each.

- Jokers are not worth any points.
- The player who placed a hedgehog on a last space (ended the round), scores **additional 3 points**.

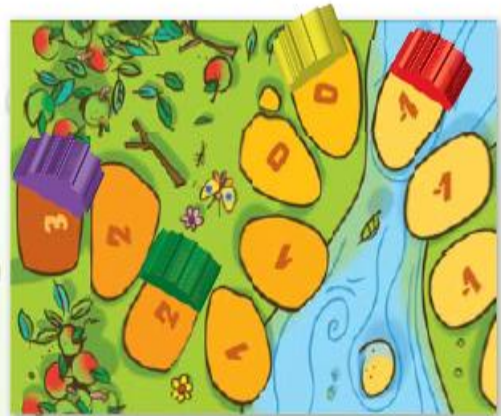

Each player adds up their points and takes point tokens equal to the scored value. Players hold on to these tokens till the end of the game.

If a player scored negative points, he receives 0 points (and doesn't lose any points from the previous rounds).

New round

The new round is prepared just like the previous one. The player to the left of the starting player from previous round begins this round.

Example of points scoring

Ala ended the round by moving the purple hedgehog to the last space. Every player scores points for the cards in hand. Ala scores 8 points for the cards (3 + 6 + 0 - 1 + 0) plus 3 points for ending the round, for a total of 11 points.

GAME END

After playing the number of rounds equal to player count the game ends. Players add up all of their points. Player with the most points wins.

In case of a tie, the winner is the player who scored more points in the previous round.

ADVANCED GAME VARIANT

In this variant, the scoring at the end of the round changes. It is more complex and requires greater counting proficiency.

We recommend this variant to older players and those who already played the base game.

Scoring

Players score points for the cards they have in hand. Points are based on the type of card as well as value equal to the space that color hedgehog is standing on:

- Each pair of cards in the same color with one plus sign scores $5x$ the number of the space value.
- Cards with one plus sign score points equal to the space value.
- Each card with two plus signs doubles the space value.
- Joker cards do not score.
- The player who placed a hedgehog on a last space (ended the round), scores **additional 6 points**.
- In a situation when the point tokens run out, the points can be scored on a piece of paper.

Example of scoring in an advanced variant

Ala ended the round by moving the purple hedgehog to the last space. Every player scores points for the cards in hand. Ala scores 13 points for the cards ($6 + 10 + 2 - 5 + 0$) plus 6 points for ending the round, so in total 19 points.
